

A modern amplifier equipped with a DSP signal processor, which enables precise correction of the sound characteristics in facilities with very difficult acoustic conditions.

Equipment of the amplifier with DSP processor:

- six balanced XLR microphone or line inputs with adjustable sensitivity, gain, treble and bass, and signaling clipping
- switchable 100Hz filter on each microphone channel, microphone / line switching and phantom power
- selection of one of the two saved settings (preset for a small or large number of people in the facility)
- universal RCA (Cinch) input with gain, treble and bass controls
- 15-point EQ with selectable parametric filter or shelving filter
- frequency adjustment from 20 Hz to 20 kHz
- bandwidth adjustment from 0.05 to 3 dB / oct.
- band depth adjustment from -12 dB to +12 dB
- selection of the type of shelf filter LoSh6, LoSh12, HiSh6, HiSh12
- 0dB XLR balanced output
- gain control
- delay line adjustment (from 0 to 170m)
- acoustic feedback suppressor
- power amplifier protections: temperature, short-circuit, current, RF protection, limiter
